

Production Line to Separate

This line assembly is incomplete due to Solidworks license expiry -_-

Now let us discuss the work in points

- **The idea of project is to make it as simple as possible to reduce cost.**
 - **I used inclined line with rollers to use gravity for box transition. (Reduce electricity and maintenance)**
 - **The Pushers on the side plate used push boxes after recognizing by code on the box.**
 - **Boxes collected by basket right the line.**
 - **Didn't draw pushers, scanners, and baskets.**
 - **First sizes are drawn from line by pushers and last one at the end of assembly line.**
